

**URGENT!**

**Immediate Response Requested**

*CDI Member Survey*

Currently, five cooperatives (CDI, Land O' Lakes, Dairy Farmers of America, Security Milk Producers Association and National Farmers Organization) are discussing a proposal that would reduce milk production by approximately 5% from April/May 2009 level of milk production.

The intention of the proposed reduction is to increase milk prices; however, the program may not result in the desired outcome. The restriction in milk production would be in place for a limited amount of time but for at least 90 days. The program would only be initiated if all five cooperatives agree to participate. No other aspects or details of the program have been agreed to and are still being considered by the five cooperatives.

We would like to get your input before engaging in further discussion on the proposed supply reduction plan. Please indicate the response that best reflects your thoughts by checking one of the boxes below.

**Yes**, I am in favor of CDI's participation in the discussion of milk supply reduction with four other cooperatives, which may require me to reduce production on my dairy to meet the 5% reduction goal.

**No**, I do not support CDI's participation in the discussion of milk supply reduction with four other cooperatives.
